## In The Frame!

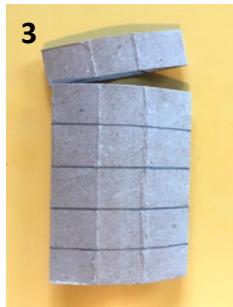

Bees create cells of hexagonal-shaped wax and the honey is placed inside each cell. Here is how you can make your own frame.

### You will need:

- ✿ Five cardboard rolls (all the same size)
- ✿ Thick card
- ✿ Ruler
- ✿ Pencil
- ✿ Scissors
- ✿ Double-sided tape
- ✿ Yellow crepe paper

1. Flatten a cardboard roll and mark the top edge of one side, so it's divided evenly in three parts. Fold the roll vertically along each marking, flattening the folds well.

2. Once folded, the roll should have six equal sides. Repeat for all rolls.

3. Cut the rolls into equal horizontal strips, until you have 28 strips.

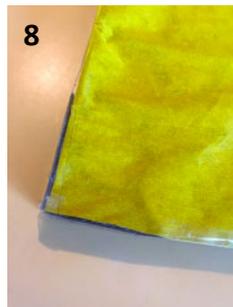

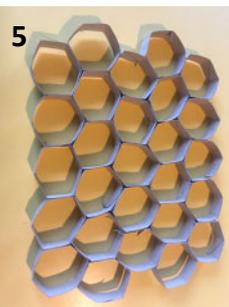

4. Use double-sided tape to join one side to another. Glue can be used but may be trickier.

5. Keep joining sides together to form a rectangle with five rows of "honeycomb".

6. Cut 4 strips of thick card, each approx. 2.5 cm x 38 cm. Measure the "honeycomb" to work out the length and width of the frame, folding at each end to make corners.

7. Place the "honeycomb" in the frame and use tape to attach where sides meets the frame.

8. Cut yellow crepe paper to the size of the frame and tape to the back of the "honeycomb". Decorate with bees.

7. Place the "honeycomb" in the frame and use tape to attach where sides meets the frame.

8. Cut yellow crepe paper to the size of the frame and tape to the back of the "honeycomb". Decorate with bees.
